## Download 2 things:

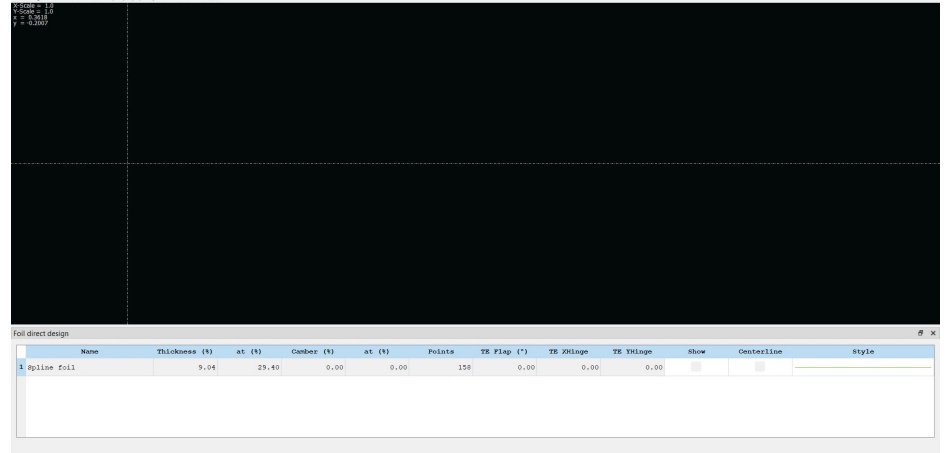

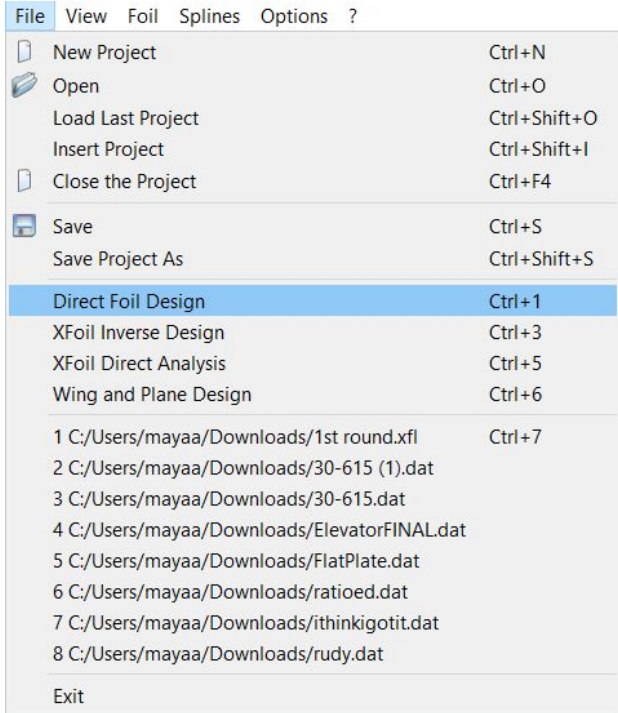

[Clark Y .dat file](#)

[Flat plate .dat file](#)

Note: make sure the file on your computer ends in “.dat” !!

- XFLR5 only recognizes .dat files with “.dat” in the name bc it’s quirky like that 🤪

# Input the foils you need

File > Direct Foil Design

# Input foil pt. 2

Then you'll open the .dat file and get this screen

# Now do the same for the flatplate

xflr5 is in permanent dark mode so sorry the pics are not showing up amazing

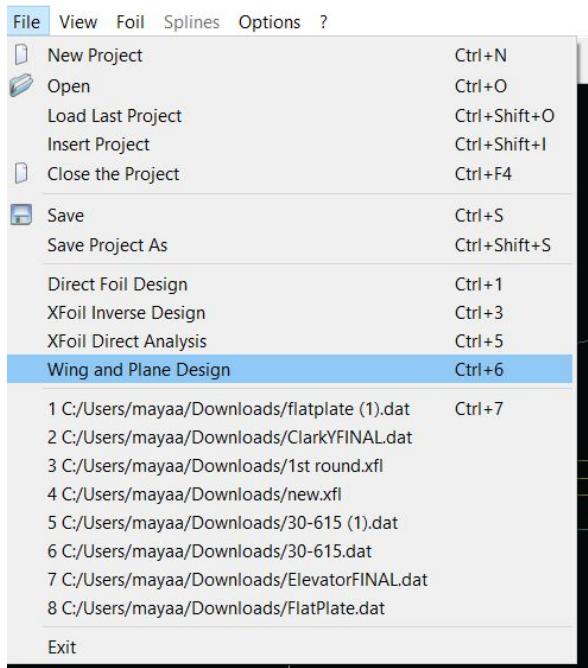

Pro tip: you can right click the foil to rename it

# Starting your plane

First off, press save

Then:

For a windows, it'll be at the top.

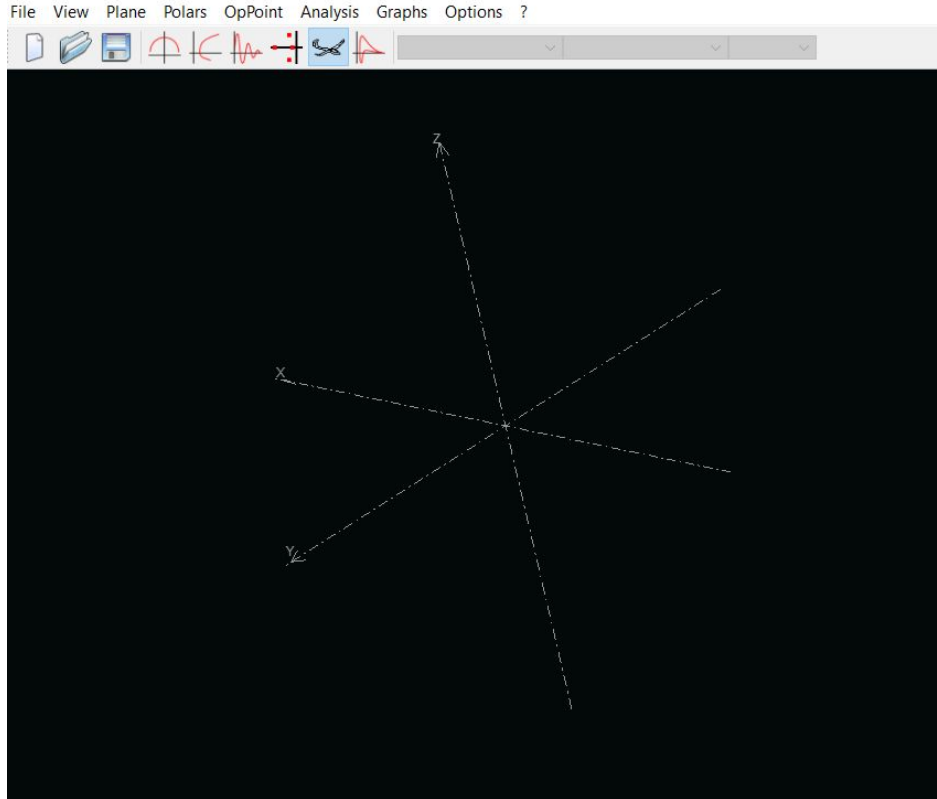

For mac, you'll have to right click first to get this (I think?)

—

# Dimensions

---

# You should be here:

This is where you're gonna create your plane.

You'll be designing and adding mass to: rudder, elevator, wing

Everything else is going to be represented through a point mass

---

# Creating your plane
